

Some Species of Edible Fruits in Yae Township, Mon State

Aye Mi Myat*

Abstract

Some species of edible fruits in Yae Township, Mon State, were studied and the specimens were collected seasonally, mostly twice a year during the rainy season and the hot season. A total of six species belonging to six genera from five families of edible fruits were collected from this area. Classification was done according to Rendle, 1967. Salient morphological characteristics of each and every species have been identified. Morphological descriptions and photographic records are also given.
