Application of the Heat Equation

Thidar Seinn[1], Hnin **Lè** Yee[2] and Khine Wah Wah Latt[3]

Abstract

In this paper, firstly we consider the heat equation with initial and boundary valued problems. Secondly, the separation of variables method is used to study the solution of this problem. Finally, the problem of heat equation is solved by using numerical method for describing random walks.

Key wards: initial and boundary valued problem, the separation of variables method, numerical method.
